Pneumatic Cylinders

Ø32 to Ø125 mm P1F Series

According to ISO 15552

Catalogue PDE3570TCEN

ENGINEERING YOUR SUCCESS.

Important

Before attempting any external or internal work on the cylinder or any connected components, make sure the cylinder is vented and disconnect the air supply in order to ensure isolation of the air supply.

Note

All technical data in this catalogue are typical data only.
Air quality is essential for maximum cylinder service life (see ISO 8573).

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met. The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

SALE CONDITIONS

The items described in this document are available for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. Any sale contract entered into by Parker will be governed by the provisions stated in Parker's standard terms and conditions of sale (copy available upon request).

Standard Cylinders ISO 15552

Global product range

The P1F Series meets the specifications of the ISO 15552 standard. This means full interchangeability to any cylinder anywhere around the globe.

The P1F will be available throughout the extensive worldwide Parker Hannifin organisation – for the benefit to you and your customers.

Features

- Smooth profile or Tie-Rods design.
- Bore sizes 32 - 125 mm.
- Stroke up to 2500 mm.
- Corrosion resistant design.
- Stainless steel piston rod.
- Polyurethane seal technology.
- Stainless steel cushioning screws on same side.
- New adjustable pneumatic and mechanical cushioning system reduces noise.
- Full range of mountings.
- Full range of drop-in' sensors.

Design Variants

Smooth profile - P1F-S, P1F-K

The P1F in bore sizes Ø32 to Ø125 mm is a smooth profile designed cylinder with a magnetic piston used for standard temperature range from -20°C to +80°C. Utilising internal composite technology to save weight and reduce impact kinetic energy, while assuring the high performance and functionality expected for an ISO cylinder. Aluminium end covers, stainless steel piston rod guided with a PTFE coated steel bearing, pneumatic cushioning and polyurethane (PUR) seals as standard, this is our smooth profile industrial ISO cylinder.

Smooth profile - P1F-A

Similar to the smooth profile version but in an ATEX variant and a restricted temperature range from -20°C to +60°C. Average speed up to 0.5 m/s and max. frequency 1Hz.

CE Ex II 2GD Ex h IIC T4 T=120°C GDb -20°C≤Ta≤+60°C

Twin Rods smooth profile - P1F-R, P1F-Q

Similar to the smooth profile version but with Twin Rods for non-rotating applications like handling and packaging.

Tie-Rods round profile - P1F-T, P1F-N

Similar to the smooth profile version but in a Tie-Rods design for heavy duty applications. Round tube is made in anodised aluminium; Tie-Rods in stainless steel as a standard.

Bore sizes Ø32 to Ø125 mm.

Large bore sizes Ø160 to Ø320 mm, see catalogue PDE2667TCEN.

Smooth profile with rod locks - P1F-L, P1F-H

With an air/spring rod lock allowing the piston rod to be braked or locked in any position. Incorporating a powerful piston rod locking device, which clamps the piston rod and locks it in position in static, H version or in dynamic, L version. In the absence of an air signal pressure, full holding force is applied to the piston rod. Fully integrated in the front end cap for the L version, added as an accessories for the H version.

Air Reservoirs - P1F-P

The air reservoirs are produced by a cylinder tube and two standard rear end plates and used, e.g. together with throttle valves to achieve a timer function in a pneumatic system. The delay of time will be varied by changing the throttle valve and by the size of the air reservoir. With a well functioning throttle valve and a suitable air reservoir it would be possible to achieve an accuracy of $\pm 5\%$. The reservoir is also used to equal pressure variants into system and to handling short extreme air consumptions without functional disorders. The air reservoirs could also be used together with check valves in order to retain a pressure which is essential for safety reasons.

Options

High temperature

All seals in the high temperature version of P1F are developed and validated for continuous operation up to $+150^{\circ}\text{C}$. The combination of the seal geometry and the FKM (fluoro elastomers) material ensures reliable and long service life. High temperature cylinders have no magnetic piston and cannot be fitted with sensors (the magnetic field strength in high temperatures is too low to ensure correct reliable sensor function).

Chemical resistance scraper

For use in applications where chemicals may affect the scraper in the front end cover, an option with a scraper in FKM (fluoro elastomers) for better chemical resistance must be used. This sealing option is combined with both end covers having a specific anodisation to a better corrosion resistance and with stainless steel screws and piston rod nut.

Metallic scraper

In environments where the piston rod may be coated with resin, ice, cement, sugar crystals, dough, etc., primarily in timber handling, refrigerated/chilled transport, cement industry, chemicals and food and drinks a metal scraper in combination with a hard-chromium plated piston rod is the right solution. Available for low temperature range applications from -30°C to $+80^{\circ}\text{C}$.

Low temperature

All seals in the low temperature version of P1F are developed and validated for continuous operation down to -40°C . Ultrathan polyurethane TPU-PUR seal technology and specifically formulated grease support performance and reliability for low temperature applications. As standard supplied with a magnetic ring in the piston for proximity sensing.

Dry running scraper

In many applications, primarily in the foodstuffs industry, the cylinders are cleaned frequently. This means that the film of grease on the piston rod is washed off, which puts special demands on the material with an FDA conformity and on the design of the piston wiper / rod itself. This sealing option is combined with both end covers having a specific anodisation to a better corrosion resistance and with the stainless steel screws and piston rod nut.

Suitable for non food area EN1672-2.

Stainless steel screws and anodised end caps

Piston rod nut and end covers fixing screws are made in stainless steel, piston rod bushing in a high polymer and end covers are anodised for a better corrosion resistance and use for applications where humidity is constant and when cylinders are frequently cleaned by chemical agents. Only available for chemical resistance and dry running scraper options.

Technical Data

Product type	Standard cylinder according to ISO 15552
Bore size	32 - 125 mm
Stroke length	5 - 2500 mm
Versions	Double acting
Cushioning	Adjustable air cushioning
Position sensing	Proximity sensor
Installation	ISO cylinder and piston rod mountings

Operating and environmental data

Operating medium	For best possible service life and trouble-free operation dry filtered compressed air to ISO 8573-1:2010 quality 3.4.3 should be used. This specifies a dew point of + 3°C for indoor operation (a lower dew point should be selected for minus temperature operation and we recommend the use of an inline dryer) and is in line with the air quality from most standard compressors with a standard filter.		
Operating pressure	1 to 10 bar	Metal scraper (option Q):	-30°C to +80°C
Ambient temperature	Standard temperature (option M): -20°C to +80°C High temperature (option F): -10°C to +150°C Low temperature (option L): -40°C to + 80°C	FKM wiper rod seal (option V): -10°C to +80°C POLON wiper rod seal (option D): -20°C to +80°C	-30°C to +80°C
Pre-lubricated	Further lubrication is normally not necessary. If additional lubrication is introduced it must be continued. Hydraulic oil type HLP (DIN 51524. ISO 11158). Viscosity by 40°C: 32 mm²/s (cst). Example: Shell Tellus 32 or equal.		
Corrosion resistance	Material and surface treatment selected for typical industrial applications with resistance to corrosion and chemicals.		

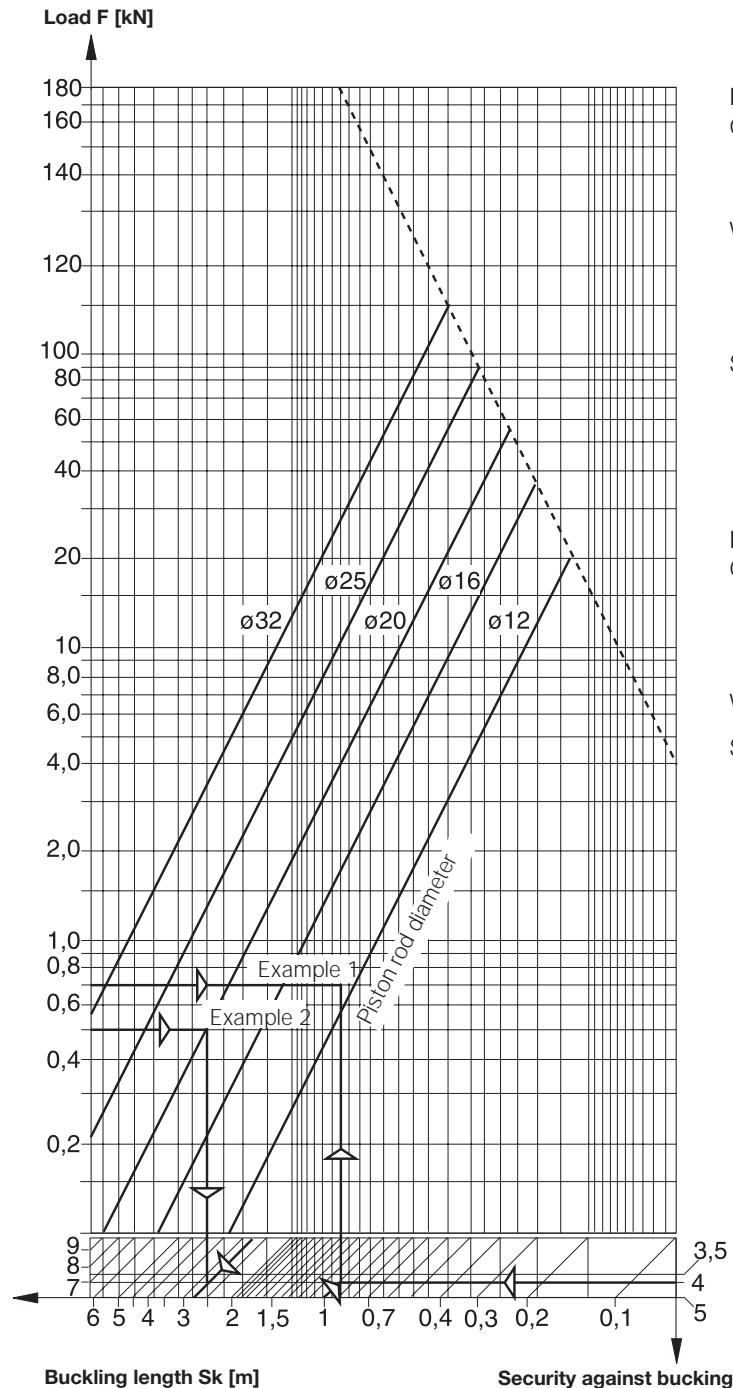

Material specification

Pos	Part	Specification
1	End covers	Aluminium / Optional black anodised (options V & D only)
2	Cylinder barrel	Anodised aluminium (profile or round tube)
3	Piston rod	Standard Austenitic stainless steel, DIN X8 CrNiS 18-9 Optional Chromium plated steel DIN C45E Optional Chromium plated stainless steel DIN X2 CrNiMoN 17-12-2, Acid proof
4	Piston rod nut	Zinc plated steel / Stainless steel (option V & D only)
5	End cover screws	Zinc plated steel / Stainless steel (option V & D only)
6	Piston rod seal	Standard Polyurethane (PUR) Optional Fluoro elastomer (FKM) / Ultrathanpolyurethane (TPU-PUR) / Metallic scraper (Brass) nitrile (NBR) / Polon / UHMW-PE
7	Piston	Standard Poloxymethylene (POM) Optional Aluminium
8	Magnet	Plastic coated magnetic material
9	Piston bearing	Standard Poloxymethylene (POM) Optional Polytetrafluoroethylene (PTFE), for aluminium piston
10	Piston seals	Standard Polyurethane (PUR) Optional Fluoro elastomer (FKM) / Ultrathanpolyurethane (TPU-PUR)
11	Piston bolt	Zinc plated steel
12	O-ring piston bolt	Standard Nitrile rubber (NBR) Optional Fluoro elastomer (FKM)
13	Piston rod bearing	Multilayer Steel / PTFE / Optional high polymer (option V & D only)
14	Cushioning seals	Standard Polyurethane (PUR) Optional Fluoro elastomer (FKM) / Ultrathanpolyurethane (TPU-PUR)
15	Cushioning screw	Stainless steel DIN X8 CrNiS 18-9
16	O-ring cushioning screw	Standard Nitrile rubber (NBR) Optional Fluoro elastomer (FKM)
17	O-ring end cover	Standard Nitrile rubber (NBR) Optional Fluoro elastomer (FKM)
	Tie-Rods	Austenitic stainless steel, DIN X8 CrNiS 18-9
	Tie-Rods nut	Zinc plated steel

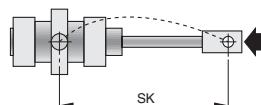

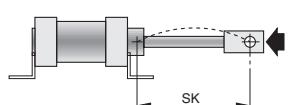

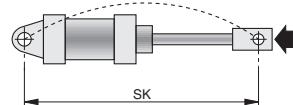

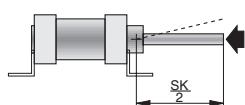

Piston rod load diagram

The piston rod diameter has to be determined to prevent the rod from buckling. Always take the maximum piston thrust force achievable at the specified operating pressure with the cylinder in question.

Loads resulting from longer strokes (as indicated in the diagram) on request. In case of special mounting conditions and transverse forces please consult. Recommended security factor against buckling: 3,5 to 5.

Buckling Possibilities of Piston Rods

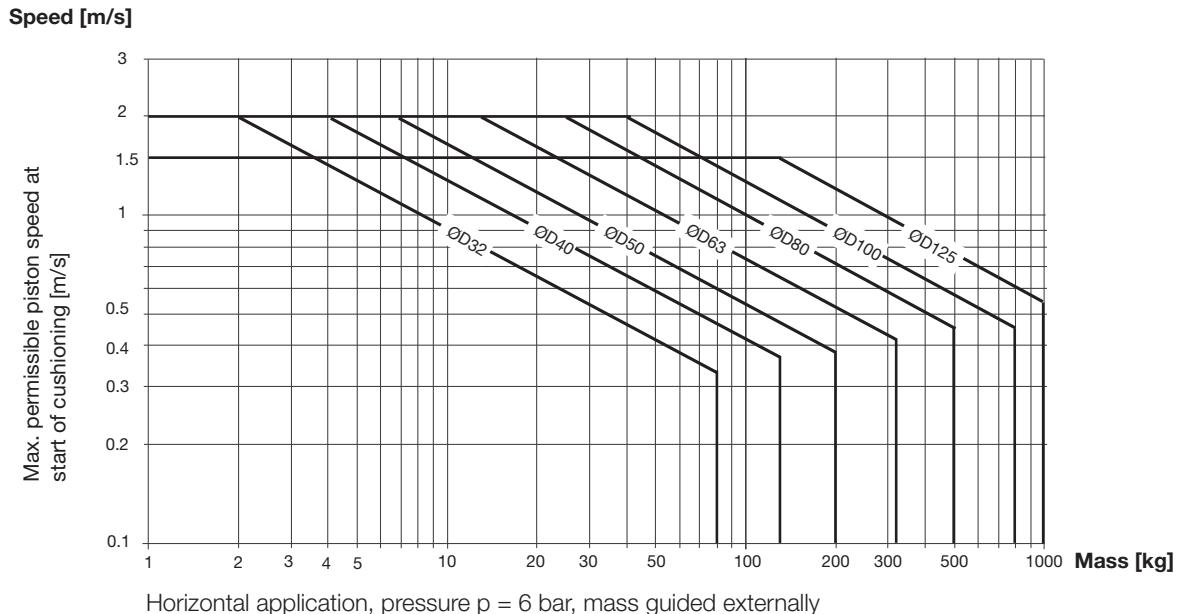

Cushioning Characteristics

Air cushion is used to absorb kinetic energy due to load and speed at both end of stroke. This typically consists of a threaded needle screw that adjusts into an orifice in the cylinder end plate. By adjusting the screw further into the orifice you lessen the amount of air that can escape in a given time. Slowing the exhaust of air creates back pressure which slows the piston as it enters into the end cushioning seal.

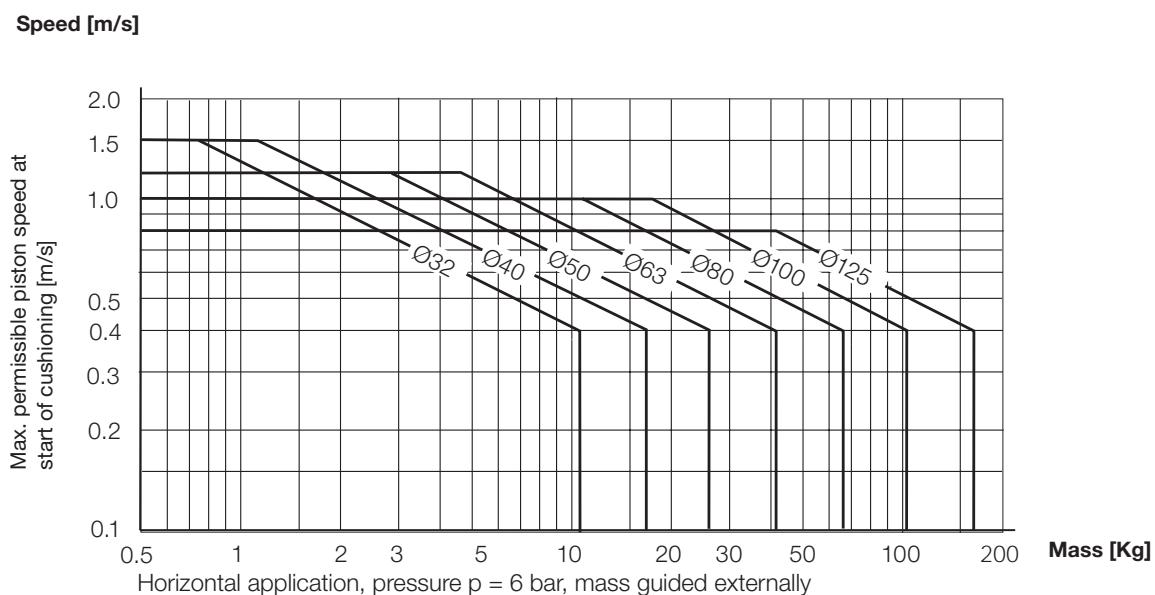

Cushioning Diagram

Work out your expected moving mass and read off the maximum permissible speed at start of cushioning. Alternatively, take your desired speed and expected mass and find the cylinder size required. Please note that piston speed at start of cushioning is typically approx. 50 % higher than the average speed, and that it is this higher speed which determines the choice of cylinder.

The mass is the sum of internal and external friction, plus any gravitational forces.

Cushioning Diagram for Cylinders with rod locks

Rod Locks

Function on pressure loss | The piston rod lock can be used in all material handling systems where controlled fastening or positioning is required. Additional measures are required for use in safety-related applications (refer to EC Machinery Directive).

The piston rod cylinder with brakes is suitable for use in safety-related sections of control systems. The piston rod lock is also suitable for use as a pressure-loss brake for cylinders with suspended loads. Piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system. The signal air to the lock unit can be connected directly to the air system or to the supply air for the valve controlling the cylinder. For controlled on/off operation of the rod lock unit, a separate valve, with large exhaust flow capacity, must be used.

Clean and compact design | The front end piece and rod lock unit for the P1F-L variant form an integrated block, keeping the length of the cylinder as short as possible. The design is easy to clean, sealed and waterproof. The exhaust air from the

lock unit can be removed by replacing the filter unit with a fitting and hose. This is an advantage in terms of cleaning or when environmental factors are important.

Use as a break | The graph on page 9 shows the maximum values for speed and braking mass if the cylinder is used as a brake. The cylinder should not be exposed to additional compressive forces as this significantly reduces the external mass that can be braked.

The cylinder does not act as a motor during braking. Heat is generated if the brake is used frequently, and this must be taken into account too. The static locking force corresponds to 7 bar pressure. Under certain circumstances, the rod lock can also be used as a brake for positioning or similar applications. The maximum values set out in the cushioning graph must not be exceeded.

Static lock forces

Cylinder bore [mm]	[N] P1F-L	[N] P1F-H
Ø32	550	600
Ø40	860	1000
Ø50	1345	1500

Rod seal Ø 50-125 mm	Polyurethane PUR	-
O Rings	Nitrile rubber NBR	-
Scraper ring	Polyurethane PUR	Polyurethane PUR
Air filter	Brass / Sintered bronze	-

Note!

If a rod guidance module is to be fitted to the brake and the cylinder, as the piston rod extension (WH dimension) for P1F-L is not in accordance with the ISO standard, the piston rod must be extended to provide the same WH dimension as for the cylinder itself. Cylinder piston rod material must be made in chromium plated steel.

Separate Rod Locking Device

The cylinder needs to have an extended piston rod.
Cylinder piston rod material must be made in chromium plated steel.

Cyl.-bore [mm]	Rod [mm]	Rod extension [mm]	Weight [kg]	Order Code
Ø32	12	48	0.60	KC8227
Ø40	16	55	0.80	KC8228
Ø50	20	70	1.00	KC8229
Ø63	20	70	1.20	KC8230
Ø80	25	90	1.40	KC8231
Ø100	25	92	1.60	KC8232
Ø125	32	122	1.80	KC8233

Functioning:

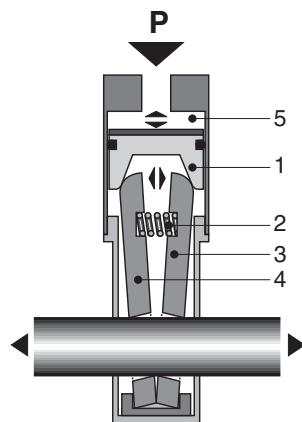

The holding force relates to a static load. If this load is exceeded, slippage can occur. Any dynamic forces occurring in operation must not exceed the static holding force. In clamped operating mode, if the load is fluctuating, the clamping unit is not free from play. The cylinder is not suitable for positioning tasks.

Important:

- The locking unit can only be mounted on the cylinder if it is held in its unlocked position either by air pressure or by a suitable screw.
- When the cylinder piston rod is locked it must not be rotated or subjected to external force.

Actuation:

The clamping unit must only be released when both cylinder chambers are pressurised, otherwise there is danger of an accident from the irregular movement of the piston rod. Shutting off the compressed air supply at both ends with a 5/3 ways valve provides adequate safety only for a short time.

Function:

If the pressure drops the piston rod is locked by two tilting plates. When the piston (1) is put under pressure it is pushed downwards, pressing the two tilting plates (3) and (4) together. The piston rod is then free to move. If the pressure drops in piston chamber (5), a spring pushes the two plates (3) and (4) apart, so that the wedge effect pushes the piston (1) upwards and the tilting plates lock the piston rod.

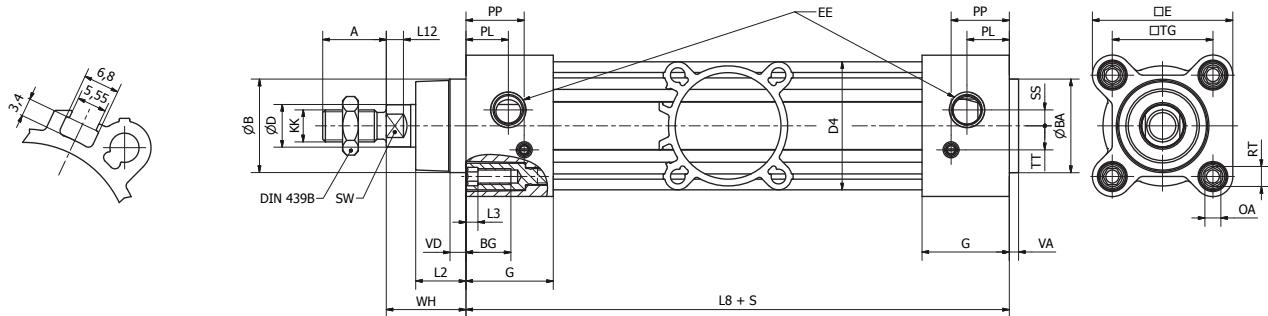

Pneumatic circuit:

The design of safe pneumatic circuits begins with a careful risk assessment. The process involves designers of all systems within a machine and/or process from mechanical to electrical. The first step is to look at the project and identify any potential hazards and risks for injury. The next step is to do a risk estimate and evaluation of each hazard. The designers can then develop the appropriate preventive measures to minimize the risk to acceptable levels. The standard developed within ISO 13849 outlines the process by which machine builders can develop their own standard for meeting the guidelines with the goal of making machines as safe as possible. The standard addresses the control of a machine and not the actual moving components (i.e. cylinders, actuators). Pneumatic circuits are usually only one part of a machine that could pose potential hazards.

Important

Pressure Equipment Directive. According (PED) to the directive 2014/68/EU, for uncertified pressure vessels:

Max Working pressure x Volume maximized to 50 Bar x litre, i.e. max 10 bar and 5 liter volume.

In accordance we therefore maximised the volume to max 5 litre cylinder.

F	Chrome plated carbon steel			
G	Chrome plated stainless steel			
Air reservoir				
A	without piston rod			

1) ATEX version is specified for standard temperature range -20°C to +60°C

2) in standard temperature range -20°C to +80°C

3) High and low temp option only with aluminium piston

4) Only in combination with chrome plated piston rod material

5) With anodised end covers, high polymer piston rod bushing and stainless steel end covers screws and nut. Only for S and K cylinder design

Standard strokes for all P1F cylinders compliant to ISO 4393

(with the exception of stroke 40 mm)

Non standard strokes up to 2500 mm

PDE3570TCEN
Pneumatic Cylinders

Technical Data

Product type	Cylinder with Twin Rods (not ISO)
Bore size	32 - 100 mm
Stroke length	5 - 2000 mm
Versions	Double acting
Cushioning	Adjustable air cushioning
Position sensing	Proximity sensor
Installation	ISO mountings

Operating and environmental data

Operating medium	For best possible service life and trouble-free operation dry filtered compressed air to ISO 8573-1:2010 quality 3.4.3 should be used. This specifies a dew point of + 3°C for indoor operation (a lower dew point should be selected for minus temperature operation and we recommend the use of an inline dryer) and is in line with the air quality from most standard compressors with a standard filter.
Operating pressure	1 to 10 bar
Ambient temperature	Standard temperature (option M): -20°C to +80°C High temperature (option F): -10°C to +150°C
Pre-lubricated	Further lubrication is normally not necessary. If additional lubrication is introduced it must be continued. Hydraulic oil type HLP (DIN 51524, ISO 11158). Viscosity by 40°C: 32 mm²/s (cst). Example: Shell Tellus 32 or equal.
Corrosion resistance	Material and surface treatment selected for typical industrial applications with resistance to corrosion and chemicals.

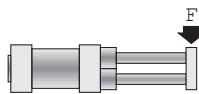

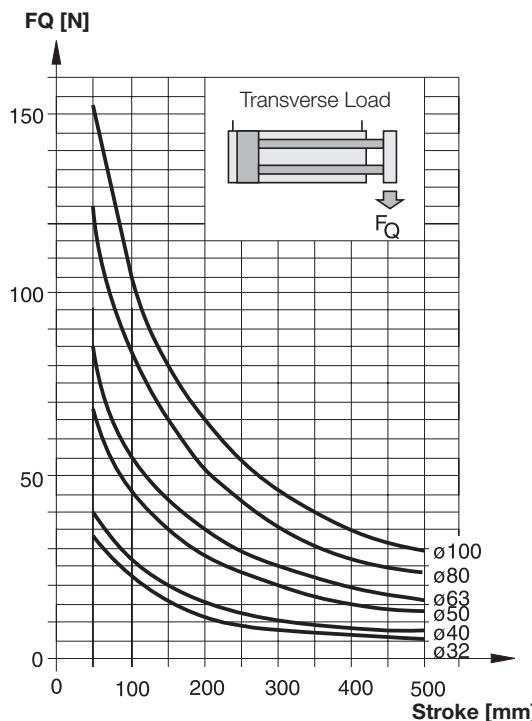

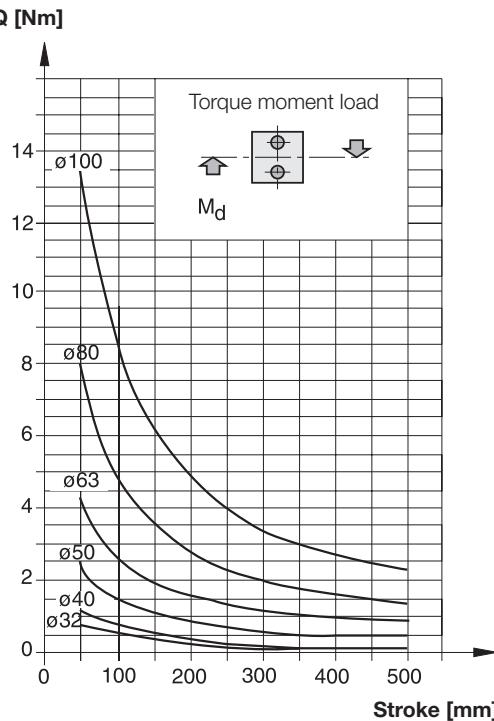

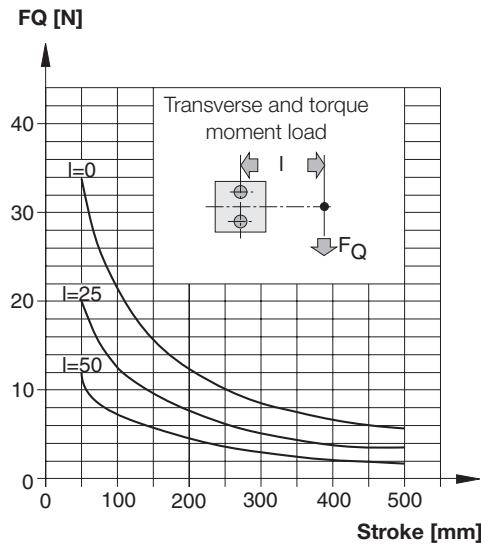

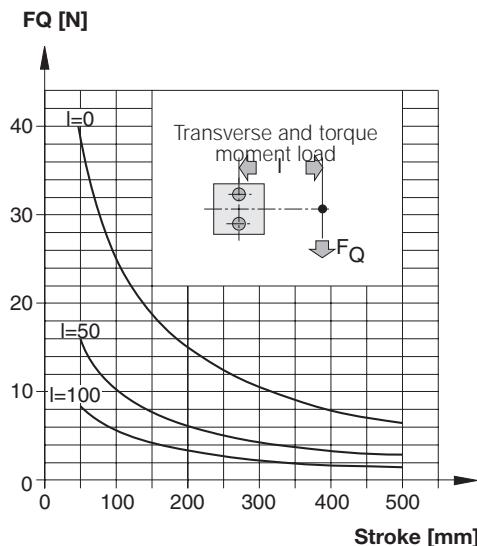

Material specification

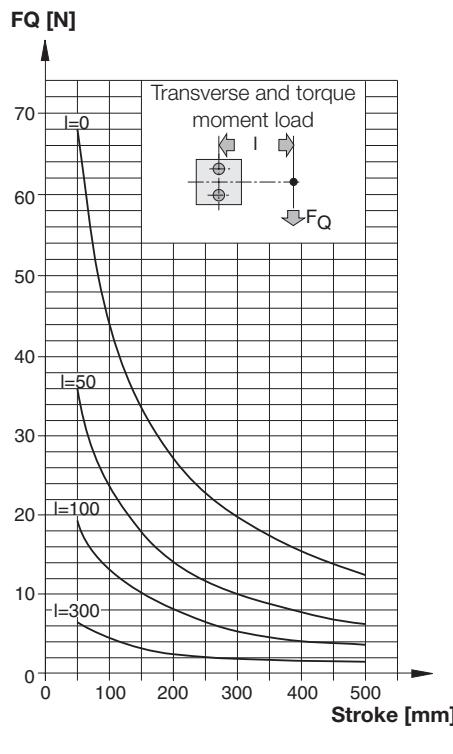

Pos	Part	Specification
1, 2	End cover	Aluminium
3	Cylinder barrel	Anodised aluminium profile
4	Piston Standard	Nitrile rubber (NBR)
	Optional	Flioro elastomer (FKM)
5	Sleeve	Brass
6	Support	Aluminium
7	Sleeve	Braas
8	Piston rod	Austenitic stainless steel, DIN X8 CrNiS 18-9
9	Magnet	Plastic coated magnetic material
10	Piston bearing	Polytetrafluoroethylene (PTFE)
11	Screw	Zinc plated steel
12	Front plate	Steel
13	Screw	Zinc plated steel
14	End covers screws	Zinc plated steel
15	O-ring end cover Standard	Nitrile rubber (NBR)
	Optional	Flioro elastomer (FKM)
16, 17	Cushioning seal Standard	Nitrile rubber (NBR)
	Optional	Flioro elastomer (FKM)
18	Cushioning screw	Brass
19	Cushioning retainer	Steel
O-ring cushioning screws	Standard	Nitrile rubber (NBR)
	Optional	Flioro elastomer (FKM)
20	Piston rods bearing	Multilayer Steel
21	Retainer	Spring Steel
22	Piston rod seal Standard	Nitrile rubber (NBR)
	Optional	Flioro elastomer (FKM)

Installation Instructions for Twin Rods Cylinders

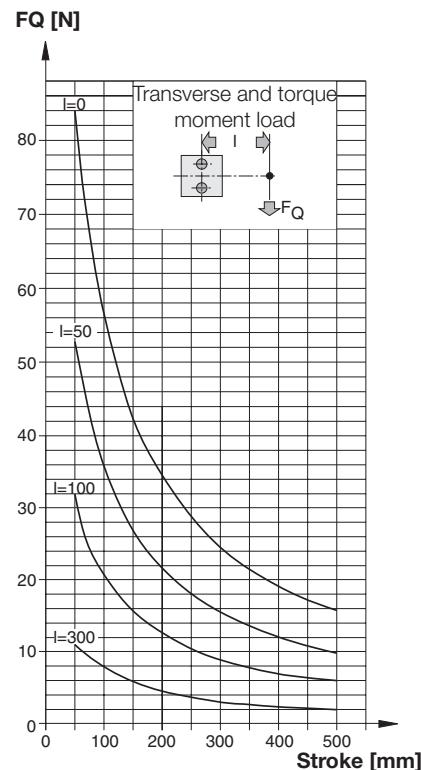

For maximum reliability and service life, transverse loads should be applied as shown.

**Transverse Load - Ø 32 -100 mm****Torque moment load - Ø 32 -100 mm****Transverse and Torque Moment Load - Ø 32 mm****Transverse and Torque Moment Load - Ø 40 mm**

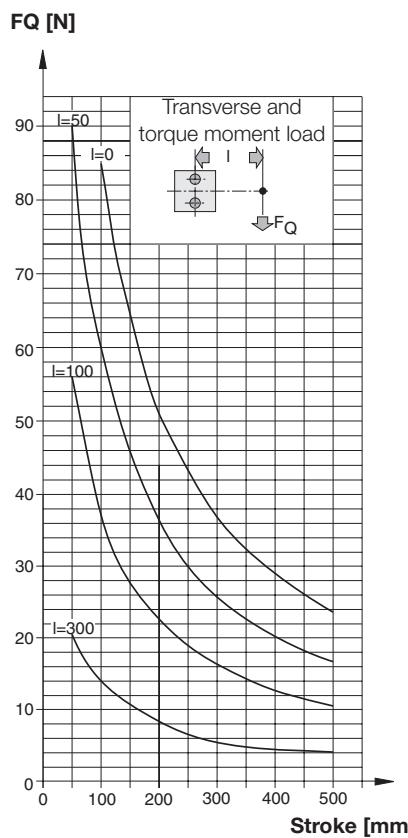

Transverse and Torque Moment Load - Ø 50 mm

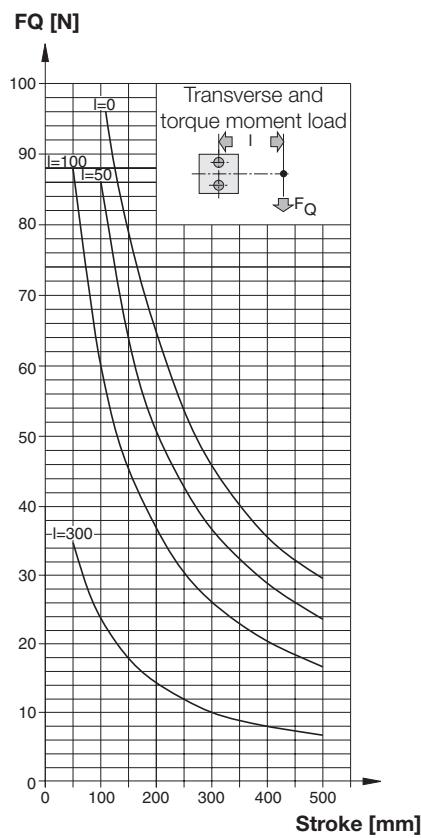

Transverse and Torque Moment Load - Ø 63 mm

Transverse and Torque Moment Load - Ø 80 mm

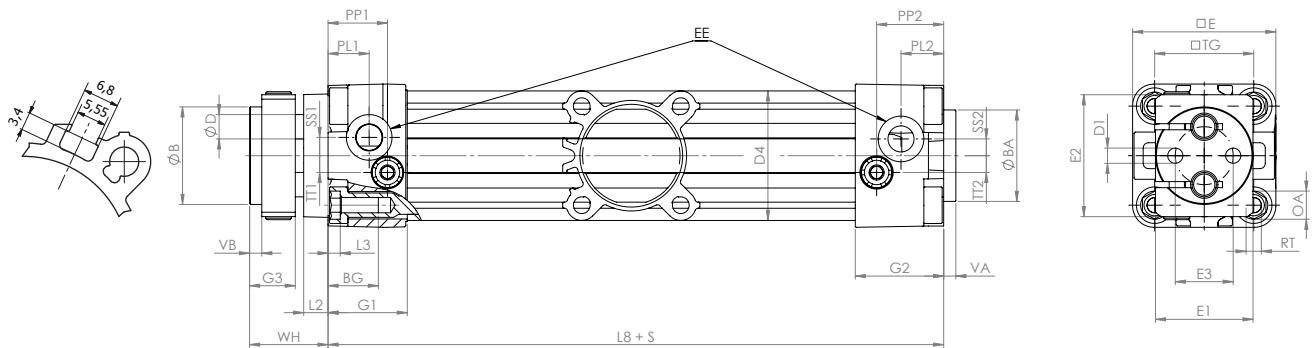

Transverse and Torque Moment Load - Ø 100 mm

------------------------------	----

Flange - MF1 / MF2**

Intended for fixed mounting of cylinder.
Flange can be fitted to front or rear end cover of cylinder.

Materials:

Flange: Surface-treated steel
Mounting screws acc. to DIN 6912:
Zinc-plated steel 8.8
Supplied complete with mounting
screws for attachment to the cylinder.

**According to ISO 15552**

Clevis Bracket - MP2

Intended for flexible mounting of cylinder.
Can be combined with clevis bracket MP4 and pivot bracket with rigid bearing AB7.

Materials:

Clevis bracket: Aluminium
(no surface treatment)
Pin: Surface hardened steel
Locking pin: Spring steel
Circlips according to DIN 471:
Spring steel
Mounting screws acc. to DIN 912:
Zinc-plated steel 8.8

Supplied complete with mounting screws
for attachment to the cylinder.

*Does not apply to cylinders with piston rod extension, lock units and Twin Rods, see page 38.

Clevis Bracket - AB6

Intended for flexible mounting of cylinder. Clevis bracket AB6 can be combined with pivot brackets MP6 and CS7 or swivel rod eye AP6.

Materials:

Clevis bracket: Aluminium (no surface treatment)
 Pin: Surface hardened steel
 Locking pin: Spring steel
 Circlips according to DIN 471:
 Spring steel
 Mounting screws acc. to DIN 912:
 Zinc-plated steel 8.8
 Supplied complete with mounting screws for attachment to the cylinder.

According to ISO 15552

Intermediate Trunnion - MT4

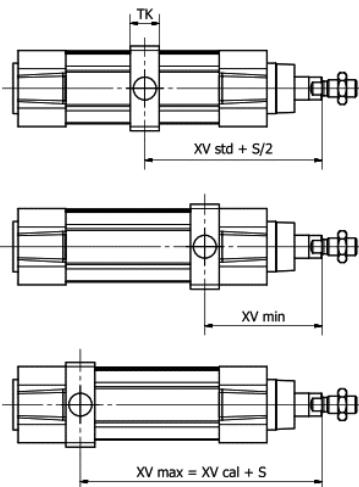

Available for P1F Profile and Tie-Rods versions the MT4 centre trunnion when combined with AT4 pivot brackets is intended for articulated mounting of the cylinder. The trunnion is free so that it can be fixed afterward when the cylinder is at the right place on the machine.

Material: Zinc plated steel

Refer to the model code page 16 for ordering cylinder with trunnion.

Important note: the rear end cylinder cover needs to be removed for adding the trunnion when ordered as a single kit.

Flange Trunnion - MT5 / MT6**

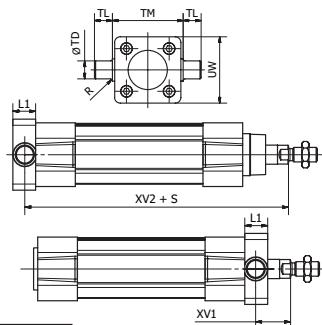

Intended for articulated mounting of cylinder. This trunnion can be flange mounted on the front or rear end cover of the cylinder.

Materials:

Trunnion: Zinc-plated steel

Screws: Zinc-plated steel 8.8

Delivered complete with mounting screws for attachment to the cylinder.

According to ISO 15552

Cyl.-bore	L1	R	TD _(e9)	TL _(h14)	TM _(h14)	UW	XV1*	XV2*	Weight	Order code

Ø100	29	2.0	25	25	132	125	37.0	203.5	3.00	P1D-4QMYF

*Does not apply to cylinders with piston rod extension, lock units and Twin Rods.

To fit a flange mounted trunnion at the front end cover of a cylinder with lock unit, the piston rod must be extended by L1 length.

This is in order to provide the same WH dimensions as for the P1F base cylinder.

**only on rear end cap for Twin Rods cylinders.

Pivot Brackets for MT Trunnion - AT4

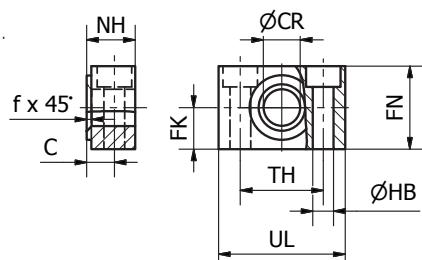

Intended for use together with trunnion MT4.

Materials:

Pivot bracket: Surface-treated aluminium

Bush: Bronze

Supplied in pairs

According to ISO 15552

For some versions of P1F cylinders mounting dimensions previously shown and marked * require adjustment. P1F cylinders with rod locks have extended piston rods so some mounting dimensions will differ from those for standard product. For rod lock versions then an additional length shown in the tables below should be added.

Adder to the dimension for P1F-L with rod lock

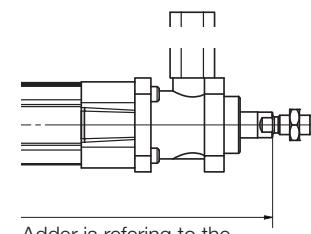

Cyl.-bore [mm]	Mounting type						
	MF1/MF2 ZB ZF	MS1 SA XA	MP6 XN	MP2 XD	MP4 XD	AB6 XD	MT5/MT6 XV1 XV2
Ø32			+32 [mm]				
Ø40			+30 [mm]				
Ø50			+29 [mm]				
Ø63			+39 [mm]				
Ø80			+45 [mm]				
Ø100			+57 [mm]				
Ø125			+56 [mm]				

Adder is referring to the piston rod flat

Adder to the dimension for P1F-H with rod lock

Cyl.-bore [mm]	Mounting type						
	MF1/MF2 ZB ZF	MS1 SA XA	MP6 XN	MP2 XD	MP4 XD	AB6 XD	MT5/MT6 XV1 XV2
Ø32			+48 [mm]				
Ø40			+55 [mm]				
Ø50			+70 [mm]				
Ø63			+70 [mm]				
Ø80			+90 [mm]				
Ø100			+92 [mm]				
Ø125			+122 [mm]				

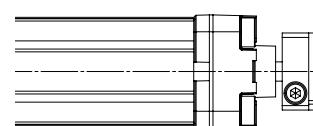

Adder is referring to the piston rod flat

For P1F cylinders with a piston rod extension then an addition length equal to the piston rod extension should be added. P1F cylinders with twin rods also have some mounting dimensions that differ from those for standard product. For these versions on bores 50 – 100mm then the length shown in the table below should be subtracted.

Adder to the dimension for P1F-R with twin-rods

Cyl.-bore [mm]	Mounting type						
	MF1/MF2 ZB ZF	MS1 SA XA	MP6 XN	MP2 XD	MP4 XD	AB6 XD	MT5/ MT6 XV1 XV2
Ø32			+0 [mm]				
Ø40			+0 [mm]				
Ø50			-3 [mm]				
Ø63			-1 [mm]				
Ø80			-8 [mm]				
Ø100			-13 [mm]				

Adder is referring to the front face of the flange

Drop-in sensors

The P8S sensors can easily be installed from the side in the sensor groove, at any position along the piston stroke. The sensors are completely recessed and thus mechanically protected. Choose between electronic or reed sensors and several cable lengths and 8 mm and M12 connectors.

Electronic sensors

The electronic sensors are "Solid State", i.e. they have no moving parts at all. They are provided with short-circuit protection and transient protection as standard. The built-in electronics make the sensors suitable for applications with high on and off switching frequency, and where very long service life is required.

Reed sensors

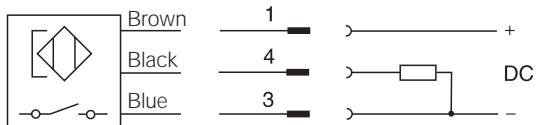

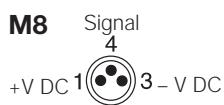

The sensors are based on proven reed switches, which offer reliable function in many applications. Simple installation, a protected position on the cylinder and clear LED indication.

	Electronic	Reed
Cylinder type:	Profile with T-slot

Pneumatic Cylinders ISO 15552

Sensors

Output/function	Cable/connector	Weight [kg]	Order code
Electronic sensors, 10-30 V DC			
PNP type, normally open	0.27 m PUR cable and 8 mm snap-in male connector	0.007	P8S-GPSHX
PNP type, normally open	0.27 m PUR cable and M12 screw male connector	0.015	P8S-GPMHX
PNP type, normally open	3 m PVC cable without connector	0.030	P8S-GPFLX
PNP type, normally open	10 m PVC cable without connector	0.110	P8S-GPFTX
Reed sensors, 10-30 V AC/DC			
Normally open	0.27 m PUR cable and 8 mm snap-in male connector	0.007	P8S-GSSHX
Normally open	0.27 m PUR cable and M12 screw male connector	0.015	P8S-GSMHX
Normally open	3 m PVC cable without connector	0.030	P8S-GSFLX
Normally open	10 m PVC cable without connector	0.110	P8S-GSFTX
Normally closed	5 m PVC cable without connector without LED	0.050	P8S-GCFPX
Reed sensors, 10-120 V AC/DC			
Normally open	3 m PVC cable without connector	0.030	P8S-GRFLX
Reed sensors, 24-230 V AC/DC			
Normally open	3 m PVC cable without connector	0.030	P8S-GRFLX2

Male connectors for connecting cables

Cable connectors for producing your own connecting cables. The connectors can be quickly attached to the cable without special tools. Only the outer sheath of the cable is removed. The connectors are available for M8 screw connectors and meet protection class IP 65.

Technical data

Operating voltage:	max. 32V AC/DC
Operating current per contact:	max. 4 A
Connection cross section:	0.25.... 0.5 mm ² (conductor diameter min 0.1)
Protection class:	IP65 And IP 67 when plugged and screwed down (EN 60529)
Temperature range:	- 25... +85°C

Connector	Weight [kg]	Order Code
M8 screw connector	0.018	P8CS0803J
M12 screw connector	0.022	P8CS1204J

Connecting cables

Description	Weight [g]	For Product Series	Order Code
Cable flex PVC 3 meter with 8mm snap-in connector / flying leads	70	P8S Sensors with M8	9126344341
Cable flex PVC 10 meter with 8mm snap-in connector / flying leads	210	P8S Sensors with M8	9126344342
Cable PUR 3 meter with 8mm snap-in female connector / flying leads	70	P8S Sensors with M8	9126344345
Cable flex PUR 10 meter with 8mm snap-in connector / flying leads	210	P8S Sensors with M8	9126344346
Cable PVC 2.5 meter with M8 screw connector / flying leads	60	P8S Sensors with knurled M8	KC3102
Cable PVC 5 meter with M8 screw female connector / flying leads	120	P8S Sensors with knurled M8	KC3104

Continuous Position Sensing

Analogue signal or IO-Link communication for linear cylinders many applications require more than just end of stroke sensing of an actuator, but traditional methods of continuous sensing are expensive and difficult to implement. Parker's CPS series of the P8S sensor family enables quick, easy, precise, and contactless position sensing of a piston. This can be installed on a standard linear actuator and offers an outstanding price to performance ratio.

Product Features:

Continuous position sensing

- IO-Link communication with M12 connector
- No modification to the actuator
- Analogue version with M8 connector
- 5 sizes with sensing ranges from 32 mm to 256 mm
- IP67 design suitable for any industrial application
- Yellow teach button for easy set-up

Technical specification:

1 ms sampling rate

0.03% full scale resolution

0.06% full scale repeatability

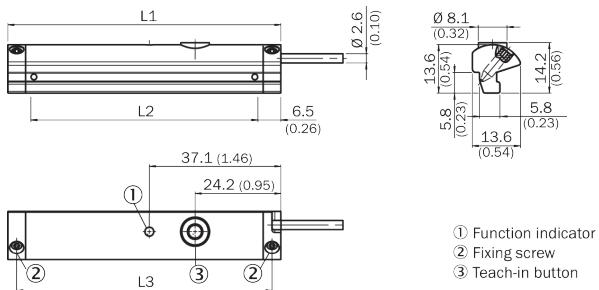

0.3 mm Linearity error

How it installs:

The Parker CPS requires the use of a magnetic piston. The product will fit T-slot cylinders without any additional mounting hardware.

1. Pivot the sensor into the slot
2. Teach the CPS unit the desired measuring range
3. Tighten set screws

Dimensions in mm (inch)

CPS Sensors

Drop in T-slot, Turn, Screw, it's done

Output	Measuring length	Configuration Option	Order Code	Weight [g]	For product series
Analogue	32 mm	Teach Button	P8SAGACHA	16	With T-slot groove *
	64 mm		P8SAGACHB	26	
	128 mm		P8SAGACHD	46	
	192 mm		P8SAGACHF	66	
	256 mm		P8SAGACHH	86	
IO-Link	32 mm	Teach Button or IO-Link parameter	P8SAGHMHA	20	With T-slot groove *
	64 mm		P8SAGHMHB	30	
	128 mm		P8SAGHMHD	50	
	192 mm		P8SAGHMHF	70	
	256 mm		P8SAGHMHH	90	

* Required magnetic field sensitivity: 3mT / -2 mT (Analogue) / 3mT (IO-Link)

Note: PUR cable with M12 (IO-Link) or M8 (Analogue) male connector knurled nut, 4-pin, 0,3 meter length. Please consult for measuring range 96, 160 & 224 mm.

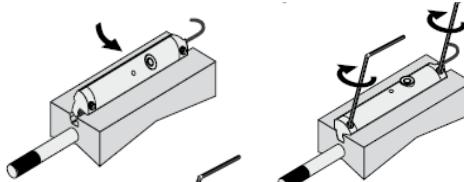

How it connects:

Analogue version has a M8 connector and a voltage output of 0-10V as well as a current output of 4-20mA. IO-Link version has a M12 connector and transmits position via 2 bytes of process input data and also allows for parameter control of measuring range and locking of the teach button. It can be controlled by Class A or Class B IO-Link Masters.

How it works:

The CPS product detects the position of an actuator via the magnet on the piston. The sensor settings can easily be adjusted during installation using the yellow teach button or during operation over the IO-Link communication. This upgrades the functionality of the pneumatic actuator by making it more intelligent and versatile in support of the Industry 4.0 initiative.

Order Code				
L1	L2 *	L3	Analogue	IO-Link
45	32	40	P8SAGACHA	P8SAGHMHA
77	64	72	P8SAGACHB	P8SAGHMHB
141	128	136	P8SAGACHD	P8SAGHMHD
205	192	200	P8SAGACHF	P8SAGHMHF
269	256	264	P8SAGACHH	P8SAGHMHH

*L2 equal to the measuring range

Specifying air quality (purity) in accordance with ISO8573-1:2010, the international standard for compressed air quality

ISO8573-1 is the primary document used from the ISO8573 series as it is this document which specifies the amount of contamination allowed in each cubic metre of compressed air.

ISO8573-1 lists the main contaminants as Solid Particulate, Water and Oil. The purity levels for each contaminant are shown separately in tabular form, however for ease of use, this document combines all three contaminants into one easy to use table.

ISO8573-1:2010 CLASS	Solid Particulate			Mass Concentration mg/m ³	Water		Oil Total Oil (aerosol liquid and vapour) mg/m ³	
	Maximum number of particles per m ³				Vapour Pressure Dewpoint	Liquid g/m ³		
	0,1 - 0,5 micron	0,5 - 1 micron	1 - 5 micron					
0	As specified by the equipment user or supplier and more stringent than Class 1							
1	≤ 20 000	≤ 400	≤ 10	-	≤ -70 °C	-	0,01	
2	≤ 400 000	≤ 6 000	≤ 100	-	≤ -40 °C	-	0,1	
3	-	≤ 90 000	≤ 1 000	-	≤ -20 °C	-	1	
4	-	-	≤ 10 000	-	≤ +3 °C	-	5	
5	-	-	≤ 100 000	-	≤ +7 °C	-	-	
6	-	-	-	≤ 5	≤ +10 °C	-	-	
7	-	-	-	5 - 10	-	≤ 0,5	-	
8	-	-	-	-	-	0,5 - 5	-	
9	-	-	-	-	-	5 - 10	-	
X	-	-	-	> 10	-	> 10	> 10	

Specifying air purity in accordance with ISO8573-1:2010

When specifying the purity of air required, the standard must always be referenced, followed by the purity class selected for each contaminant (a different purity class can be selected for each contamination if required).

An example of how to write an air quality specification is shown below:

ISO 8573-1:2010 Class 1.2.1

ISO 8573-1:2010 refers to the standard document and its revision, the three digits refer to the purity classifications selected for solid particulate, water and total oil. Selecting an air purity class of 1.2.1 would specify the following air quality when operating at the standard's reference conditions:

Class 1 - Particulate

In each cubic metre of compressed air, the particulate count should not exceed 20,000 particles in the 0.1 - 0.5 micron size range, 400 particles in the 0.5 - 1 micron size range and 10 particles in the 1 - 5 micron size range.

Class 2 - Water

A pressure dewpoint (PDP) of -40°C or better is required and no liquid water is allowed.

Class 1 - Oil

In each cubic metre of compressed air, not more than 0.01mg of oil is allowed. This is a total level for liquid oil, oil aerosol and oil vapour.

ISO8573-1:2010 Class zero

- **Class 0 does not mean zero contamination.**
- **Class 0 requires the user and the equipment manufacturer to agree contamination levels as part of a written specification.**
- **The agreed contamination levels for a Class 0 specification should be within the measurement capabilities of the test equipment and test methods shown in ISO8573 Pt 2 to Pt 9.**
- **The agreed Class 0 specification must be written on all documentation to be in accordance with the standard.**
- **Stating Class 0 without the agreed specification is meaningless and not in accordance with the standard.**
- **A number of compressor manufacturers claim that the delivered air from their oil-free compressors is in compliance with Class 0.**
- **If the compressor was tested in clean room conditions, the contamination detected at the outlet will be minimal. Should the same compressor now be installed in typical urban environment, the level of contamination will be dependent upon what is drawn into the compressor intake, rendering the Class 0 claim invalid.**
- **A compressor delivering air to Class 0 will still require purification equipment in both the compressor room and at the point of use for the Class 0 purity to be maintained at the application.**
- **Air for critical applications such as breathing, medical, food, etc typically only requires air quality to Class 2.2.1 or Class 2.1.1.**
- **Purification of air to meet a Class 0 specification is only cost effective if carried out at the point of use.**
